Let rise for 12-14 hours at 22-24°C with the 70-80% of relative humidity. If the proofer room is devoid of humidifier, cover the dough with a plastic cloth.

The dough shall quadruple its initial volume.

##### ADVICE:

- We suggest to cut out a 250g piece of dough and to put it into a 1L jug to check the pace of the leavening and verify the quadruplication of the volume.
- We suggest to begin to knead at second speed and then, when at  $\frac{3}{4}$  of the kneading time, change to first speed and bring the kneading to end.
- If the temperature of the first dough is above 28°C, it will be necessary to decrease the leavening time.
- If you are using a planetary mixer with a "dough hook" attachment or a spiral mixer you will have to reduce the amount of water specified in the first dough (we suggest you to use 2400/2250 gr)

### PREPARATION

The next morning, the dough shall be slightly curved.

Add DOLCE FORNO MAESTRO and water to the first dough and knead for 5-10 minutes.

When well-combined, add sugar, salt and one part of egg yolk. Then add the remaining egg yolk in two times.

Meantime, prepare a mixture of softened butter, honey and JOYPASTE VANIGLIA. Once the mixture is ready, add it to the dough in 4 times.

Be sure that the temperature of the dough is 26-28°C, in the temperature is lower we suggest you to warm up the candied fruit just for 1-2 minutes in the oven.

Add gently the candied red fruit.

Let the dough and rest in the proofer room at 28-30°C for about 75-90 minutes.

Divide the dough into portions of the required size (1kg colomba requires two portion of 450gr each) and roll each portion up into into a ball shape. Move onto boards or trays and leave to rest at 28-30°C for another 20 minutes.

Roll them up tight again and transfer into the specific paper moulds.

Put in the proofer room at 28-30°C with relative humidity of about 70% until the top of the dough nearly leans out of the edge of the mould; if the proofer room is devoid of humidifier, cover the dough with plastic sheets.
