	ADVICE:	
	-We suggest	to cut out a 250g piece of dough and to put it into a 1L jug to check the pace of the
	leavening and	d verify the quadruplication of the volume.
	-We suggest	to begin to knead at second speed and then, when at $3\!\!\!\!4$ of the kneading time, change to
	first speed ar	d bring the kneading to end.
	-If the temper	ature of the first dough is higher than 28°C, you have to shorten the first rising time.
	-If you use a	spiral kneading machine or a planetary mixer with the hook attachment, you have to

		the dough is 1cm far from the edge of the mould. If the proofer room is devoid of humidifier, cover the
		dough with plastic sheets.
		N.B. If you want to add some flavourings to personalize your products, you can add them to the
		second dough.

FINAL COMPOSITION

At the end of the rising, leave the panettoni exposed to the air for 10 minutes until a light film forms over the surface.

With a small, sharp knife, make two superficial cuts to create a cross (these cuts shall not be deep and are necessary to give end product the typical and traditional shape).

Cut the dough under the 4 flaps while throwing and folding them back, then place a pat of butter and return the 4 flaps back to the original position.

Bake at 170-190°C, time depending on the weight (consider about 35-40 minutes for 500g panettoni and 50-55 minutes for 1000g ones), until the temperature of the center reaches 92-94°C.

As soon as they are removed from the oven, the panettoni should be placed onto the specific toothed racks and left to cool upside down for 8-10 hours at least before being wrapped in Moplefan bags.
